- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Il sito costituisce una piccolo colle posto nel altopiano del massiccio silano compreso tra 1250 m e 1350 m s.l.m. a circa 8 km a NO del centro abitato di San Giovanni in Fiore che ospita una pineta a Pino laricio. Come in gran parte dell’altopiano silano anche in quest’area il substrato roccioso é costituito dal Batolite silano. Si tratta di rocce granitiche intensamente fratturate ed attraversate da filoni plutonici con uno spesso orizzonte di alterazione (regolite) ed un suolo di colore scuro. Il regolite é caratterizzato da un orizzonte di roccia alterata che può

raggiungere diverse decine di metri di spessore. Dal punto di vista bioclimatico il sito appartiene alla fascia submediterranea superiore della regione temperata, con regime oceanico.
